Portfolio: [onyshchukv.com](http://onyshchukv.com)

## Qualification Summary

Senior Product Designer mainly focused on enterprise software, analytics, and AI.

Over the last 15 years, I've worked on enterprise analytics, financial planning, scientific research, marketing automation, and AI-assisted products, helping users make sense of large amounts of data and complex workflows.

My work focuses on information architecture, workflow design, design systems, and turning technically complex products into experiences people can understand and use.

### Language skills

- English: Fluent
- Ukrainian, Russian: Native
- Czech: B1
- German: A2

### Software and technology skills

- Web: HTML, CSS, JavaScript, React – can review, fix small issues, communicate with developers and Vibe code.
- Design: Figma, Sketch, Photoshop or any other
- Prototyping: Vibe Coding, Figma
- Analytics: Google Analytics, Similarweb

### Education

- Kyiv National University of Construction and Architecture  
*Master Degree, 2004 – 2009*
- Bionic University, [bionic-university.com](http://bionic-university.com)  
*Interface Design, 2014*
- Projector, [prjctr.com.ua](http://prjctr.com.ua)  
*Axure Pro 7, 2015*  
*UX. Data Mining & Analytics, 2016*
- Coursera, [coursera.org](https://coursera.org)  
*User Experience: Research & Prototyping, 2016*

## Experience

### Infor – **Senior UX Designer**

August 2016 – Now. Prague

Infor is a global enterprise software company. Worked on the Enterprise Performance Management (EPM) suite, designing tools for financial planning, reporting, analytics, data discovery, and AI-assisted workflows.

#### Achievements

- Designed and launched an MS Excel plugin that gave finance teams direct access to multidimensional OLAP data. The product later evolved into AdHoc, a web-based reporting and data discovery platform that became a core part of the EPM suite.
- Led the UX design of major EPM products, including reporting, dashboarding, analytics, and cloud migration initiatives, helping modernize a large enterprise platform used by global organizations.
- Built and evolved the EPM design system over multiple generations, from the first component library to a React-backed design-to-code workflow with support for theming, accessibility, and scalable product development.
- Worked closely with front-end developers to translate design patterns into reusable React components and establish a shared source of truth between design and engineering.
- Consulted Infor's global design team on component architecture, design system governance, and usability improvements, helping align local and company-wide design practices.
- Conducted user interviews, customer workshops, and stakeholder reviews to understand complex financial workflows and turn them into scalable product solutions.
- Introduced interactive prototyping into the design process, allowing teams to validate ideas earlier, improve collaboration, and reduce implementation risk.
- More recently, helped define AI-assisted reporting experiences that allow users to generate reports and explore business data using natural language.

### Neuron UX Agency – **Senior UX Design Consultant**

January 2021 – March 2024

Neuron UX is a boutique UX/UI design and strategy agency based in the United States, with hubs in San Francisco, Boston, and New York. They specialize in transforming complex B2B and enterprise software into intuitive, human-centered digital products.

Worked as a product design consultant across SaaS, enterprise, healthcare, marketing automation, scientific research, workforce management, and social platform products.

#### Achievements:

- Contributed to more than 10 product redesign and innovation projects as part of multidisciplinary design teams, helping clients improve usability, modernize legacy systems, and define future product direction.
- Led end-to-end design efforts on multiple projects, working directly with clients, stakeholders, subject matter experts, and development teams throughout discovery, strategy, UX, and delivery phases.
- Specialized in complex data-heavy products, including scientific research platforms, enterprise analytics tools, marketing automation systems, and workflow-intensive SaaS applications.
- Conducted user interviews, stakeholder workshops, usability reviews, and competitor analysis to uncover user needs, validate assumptions, and identify product

opportunities.

- Defined information architecture, product structure, navigation systems, and interaction models for large-scale enterprise applications.
- Designed complex workflows, reporting experiences, search systems, automation tools, and data visualization interfaces that helped users navigate highly technical domains more efficiently.
- Created wireframes, prototypes, design systems, and high-fidelity UI while maintaining close collaboration with engineers to ensure successful implementation.
- Worked across the full product lifecycle, from discovery and concept validation through design delivery and implementation review.

### **Bileto Technologies – UX/UI Designer**

November 2015 – August 2016. Prague

Bileto is a cloud platform that enables transportation companies to manage routes, ticket sales, reservations, and online bookings.

#### **Achievements:**

- Owned the end-to-end product design process within a startup environment, working across discovery, UX, UI, prototyping, testing, and implementation.
- Conducted market and competitor research to identify opportunities, validate ideas, and inform product direction.
- Defined user flows and usage scenarios for both transportation operators and ticket buyers, helping shape the overall product experience.
- Created wireframes, interactive prototypes, and high-fidelity designs, iterating continuously based on stakeholder and user feedback.
- Tested clickable prototypes with target users to validate assumptions and improve usability before development.
- Worked closely with front-end developers throughout implementation, ensuring design quality and resolving UX issues during development.
- Supported business and sales activities by creating product presentations and visual materials used in client meetings and product demonstrations.

### **Aweb – Designer**

March 2014 – May 2015. Kyiv

Aweb is the most rewarded website promotion company in Ukraine. They consult and promote websites and online stores by rewriting texts, redesigning layouts and reprogramming code.

My main task was to help clients to improve conversion rate of their websites with design. Made research with Google Analytics, made prototypes, redesigned pages and structures, launched A/B tests, conducted customer surveys, created infographics and advertisement, and took responsibility for the result.

### **Freelance – Designer and Project Manager**

2011 – 2015

Designed various interfaces, mobile applications, dashboards, websites.
